Subject: Application for an End-Of-Study internship.

Enclosed: Curriculum vitæ.

Hello,

My name is Abderrahman ES-SARAOUI, I am an extremely motivated Embedded Systems Engineering student at the national school of applied sciences (ENSA-M) with an interest in the field of **Digital IC Design and Computer Architecture**. After having two great internship experiences I am currently looking for an End-Of-Study internship opportunity. I excel when working in collaborative groups, especially on Intellectually Challenging projects. I am writing to let you know of my interest in joining your company for an end of study internship.

During the last two years I've built a solid learning base concerning the field of embedded systems more specifically computer engineering thanks to the rich program taught in my school and also to the multitude of trainings that I followed (Computer Architecture, Reconfigurable Computing, Digital Logic Design, HDLs: VHDL, System Verilog...). Also, I refined my profile by concretizing my skills through work on several extracurricular projects. Therefore, I developed my skills in terms of communication, leadership, discipline, versatility and teamwork.

The Integration into your company will be a real professional opportunity for me. Through which, I feel I can discover the challenges of this profession through the missions you may want to entrust me with. In return, I am committed to bringing new energy to the team, and I would put my know-how and skills at the service of the company, in order to jointly develop new ideas. The attached resume will give you full details of my skills and the projects I have been a part of.

I remain at your entire disposal for any further information or a possible exchange and please accept, Sir / Madam, my best regards.

ES-SARAOUI ABDERRAHMAN
